

ASSIGNMENT (Pseudocodes)

LAB-12

~~1) Initialize i = 0~~

1) int print numbers
{

 i = 0

 while (i ≤ 10)

 {

 print i

 i = i + 1

 }

}

2) int print even numbers
{

 for (i = 0 to 50)

 {

 if (i % 2 == 0)

 {

 print i

 }

 }

}

3) int print table upto 15 (int number)
{

 n = 1

 until { n > 15 }

 {

 print (n * number)

 n = n + 1

 }

}

4) `int [] readFileAndPrint (int [] numbers num; nums.txt)`
{

`read -ra numbers < nums.txt`

`print numbers [*]`

`for i in numbers [*]`
{

`print (numbers[i] * 2)`

}

}

5) `float divide (int num1, int num2)`
{

`if (num2 == 0)`
{

}

`print "Division by zero is not allowed"`
}

`else`
{

}

`quotient = num1 / num2`

`remainder = num1 % num2`

`print quotient upto 2 decimal places`

`print remainder`
}

}

}

6) `int maximum (int num1, int num2)`
{

`if (num1 > num2)`
{

}

`print num1`
}

}

`else`
{

`print num2`
}

}

```

7) check Directory (directory)
{
    if (directory does not exist)
    {
        create directory
        print at "directory created"
    }
    else
    {
        print "directory exist"
        list files in directory
    }
}

```

Practice Problems

Aug 18

```

1) check File (filename)
{
    if (file exists)
    {
        print "File exists"
        if (file is readable and writable)
        {
            print "File is readable and writable"
        }
        else if
        {
            print "File is not readable and writable"
        }
    }
    else
    {
        print "File does not exist"
    }
}

```

2) checkCountFile (filename)

{

if (filename exists)

{

words = count number of words in filename

lines = count number of lines in filename

characters = count number of characters in filename

print words

print lines

print characters

}

else

{

print "file does not exist"

}

}

3) 1) List contents of current directory.

2) Sort files in descending order of size using ls -S.

3) Take first file from the sorted list.

4) Store it as largestFile.

5) Print largestFile.

Aug 19

1) findWord (string word, string ~~file~~ filename)

```
{  
    if (file exists)  
    {  
        search word in filename  
        print lines containing word  
    }  
    else  
    {  
        print "file does not exist"  
    }  
}
```

2) int multiplicationTable (int number)

```
{  
    for (i = 1 to 20)  
    {  
        result = number x i  
        print number "x" i "=" result  
    }  
}
```

3) checkDiskUsage ()

```
{  
    usage = get Current Disk Usage  
    print "Current disk usage: " usage  
    if (usage > 80)  
    {  
        print "Warning: Disk usage is above 80 %"  
    }  
}
```
